類型: SaaS & APIs

上次更新時間: 2021/7/23

類別: <u>Big data</u>, <u>Google Enterprise APIs</u> 服務名稱: cloudiot.googleapis.com

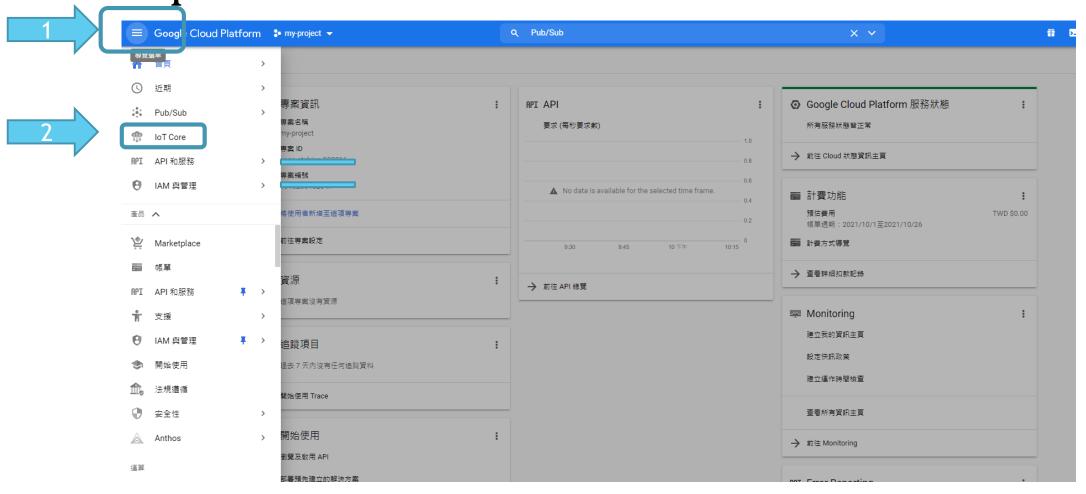

Repeat Step 1~3 to enable Pub/Sub

Create registry

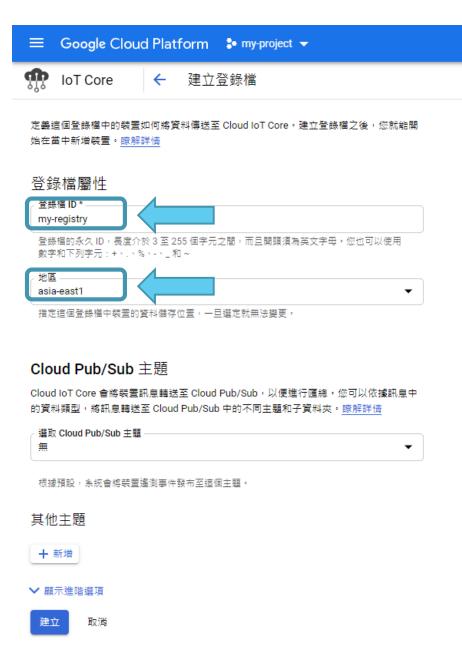

- 您尚未針對這項專案建立登錄檔。
- 按一下 [+ 建立登錄檔] 按紐即可新增登錄檔。

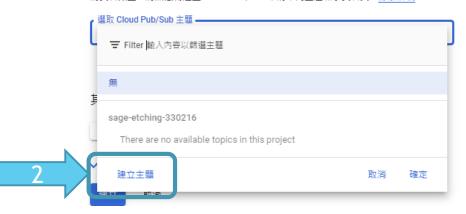

Cloud Pub/Sub 主題

Cloud IoT Core 會將裝置訊息轉送至 Cloud Pub/Sub,以便進行匯總。您可以依據訊息中的資料類型,將訊息轉送至 Cloud Pub/Sub 中的不同主題和子資料來。瞭解詳情

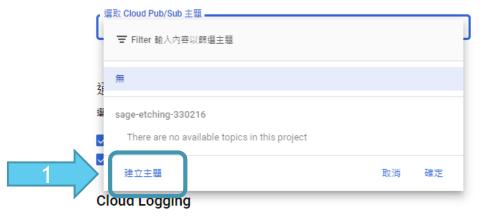

装置狀態主題 (選填)

系統會盡可能將裝置狀態資料發布至您選取的主題。如果您的裝置使用的是 MQTT 通訊協定,則系統會一併將這類資料發布至預設的 MQTT 狀態主題。瞭解詳情

設定這個登錄檔中所有裝置的預設記錄功能,您可以在裝置層級套用不同設定或偵錯。 <u>瞭</u> 解詳情

- 已停用 不儲存裝置資料。
- 容証

Set up your gateway (Raspberry Pi) Step 1

git clone https://github.com/andykuo8766/GCP_Pi.git

```
pi@raspberrypi:~ $ git clone https://github.com/andykuo8766/GCP_Pi.git
Cloning into 'GCP_Pi'...

封鎖閘道後,Google Cloud 會拉維閘道傳出的所有通訊內容。如果閘道發王問題或未經過 設定,您可以考慮封鎖閘道。

- 允許
- 封鎖

Cloud Logging

選擇這個閘道的記錄檔設定,這項設定只會覆寫該閘道的登錄檔預設值。 瞭解詳情

- 使用登錄檔預設設定
- 已停用 不儲存閘道資料。
- 錯誤 類取聞道錯誤,例如失敗的連線嘗試和發布作業,但不包含驗證錯誤。
- 資訊 僅限 MQTT。擷取閘道錯誤 (驗證錯誤除外) 並包含所有生命週期事件,例如閘道連線與中斷 連線事件。
- 債錯 以極為詳盡的記錄陳述式擷取所有閘道活動,適合用於閘道疑難排解。

驗證 (選填)

指定要用來驗證這個閘道的公開金鑰。您可以將金鑰欄位留空。不過如未提供金鑰,閘道 就無法連結至 Google Cloud。 瞭解詳情

輸入方法

- 手動輸入
- 〇 上傳

公開金鑰格式RS256

公開金鑰值。

----END PUBLIC KEY----

裝置驗證方式

決定 Cloud IoT Core 如何驗證及信任與這個閘道相關聯的裝置。 瞭解詳情

● 僅限關聯

信任繫結至這個閘道的任何裝置。

○ 僅限裝置憑證

信任各個裝置前,請先檢查裝置的 JWT。

○ 開聯與裝置憑證

信任各個裝置前,請先檢查裝置的 JWT 和繫結的閘道。

▲ 通訊、CLOUD LOGGING、驗證

Change to browser Step 5

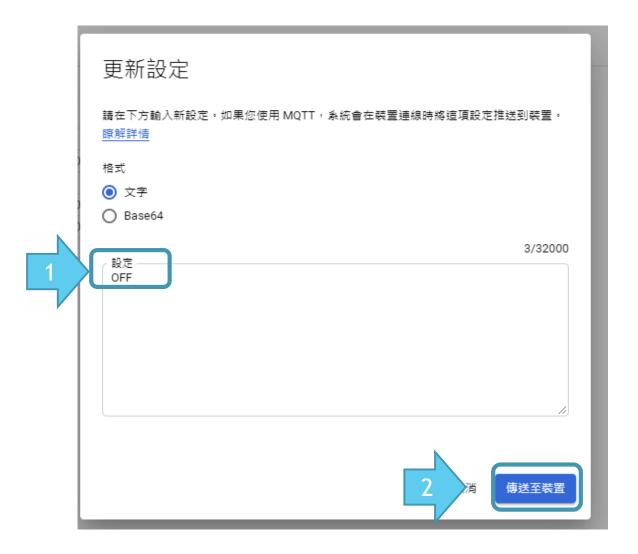

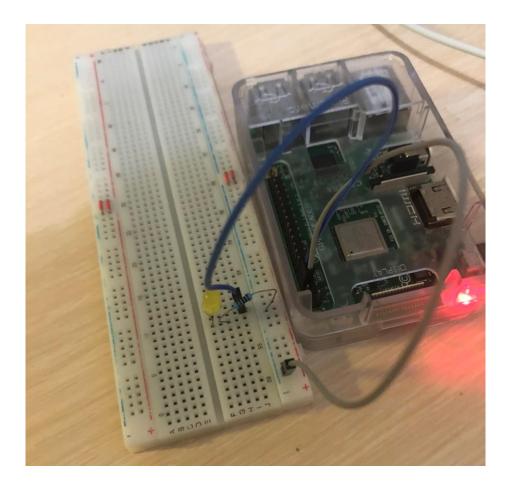

Assignment

Part I (Publishing telemetry events through the gateway)

- Set up a DHT22 sensor to send telemetry from the sensor through the gateway to IoT Core.
 - Repeat steps from the previous section, "Managing devices through configuration updates", but use thermostat as the Device ID.
 - Edit thermostat.py by adding the IP address of your gateway on line 27: ADDR = "
 - Wire the DHT22 sensor to the Raspberry Pi as described in the setup section of this <u>tutorial</u>.
 - Run the following from a terminal on the Raspberry Pi:

```
source run-thermostat
```

• If everything is done correctly, you should see the temperature on that terminal updating once per second.

```
pi@raspberrypi:~/GCP_Pi/cloud-iot-gateways-rpi $ source run-thermostat
Bringing up device thermostat
Bring up device 1
Send data: { "device" : "thermostat", "action":"detach" }
sending: "{ "device" : "thermostat", "action":"detach" }"
waiting for response
received: "{ "device": "0", "command": "4", "status" : "ok" }"
Response { "device": "0", "command": "4", "status" : "ok" }
Send data: { "device" : "thermostat", "action":"attach" }"
sending: "{ "device" : "thermostat", "action":"attach" }"
waiting for response
received: "{ "device": "thermostat", "command": "attach", "status" : "ok" }"
Response { "device": "thermostat", "command": "attach", "status" : "ok" }"
>>Temp: 20.100, Hum: 50.500 <</pre>
```

Assignment

Part II (Create a subscription to your telemetry topic to view data)

- Open the Pub/Sub dashboard.
- Click the three-dot menu button next to the telemetry topic that you created earlier, and click New subscription.
- Enter a subscription name, such as my-subscription.
- Make sure that Delivery Type is set to Pull, and leave everything else as-is.
- Click the Create button to create the subscription.
- Click the Activate Cloud Shell icon in the upper right area of the Cloud Console window.

• In Cloud Shell, enter the following:

gcloud pubsub subscriptions pull my-subscription --auto-ack --limit=100

```
andy8766kuo@cloudshell:~ (sage-etching-330216) $ gcloud pubsub subscriptions pull my-subscription --auto-ack --limit=100 DATA: RPI Gateway started.
